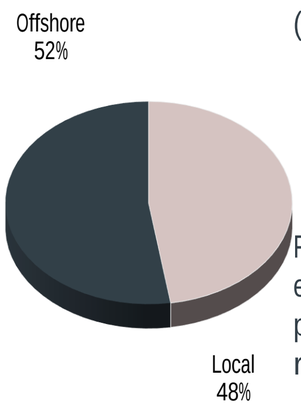
PRAGMA

The domestic market was influenced by the international trend: major correction on the stock markets and a better performance in Fixed Income. Also, the political discussion dominated, after the return of parliamentary recess. Dispute over the imposing budget, caused difficulty in resuming the reform agendas (administrative and tax) and other parallel themes such as the independence of the Central Bank and the sewage system agenda. In the domestic environment, the economic activity (GDP) numbers remained weak in 2019. On the other hand, expectations for further interest rate cuts have increased.



Fixed Income was the only class that had a positive result in February, after a strong risk aversion movement caused by the expected impact of the coronavirus on economic activity. The virus quick spread in countries like South Korea, Italy and Iran, caused a collapse in health services in those countries and brought even more problems in the markets. In face of this situation, there was an expected reaction from the Central Banks, injecting more liquidity into the system and cutting interest rates, such as the FED that cut the rate by 50 bps, in an extraordinary meeting this month.

Amapa local portfolio returned -2.0%, aligned with its benchmark. February recorded losses: International Equities contributed with -5.0% and Local Equities -5.5% against its benchmark, -8.2%. Despite the negative return, the Local Equities class was able to protect the portfolio regarding its benchmark, IBX. The international portfolio also had a negative performance -5.4%. The negative highlight was International Equities that recorded loss of -9.5%, contributing to the negative performance of the portfolio.
