

The imminent monetary tightening combined with the poor inflation data were the main responsible for the indexes' negative performance in February. The conflicts in Ukraine, despite having started on February 24th, affected the asset prices in March. The exception was the EMBI index, that reflected immediately the risk increase, due to the fact that 5% of the portfolio is concentrated in Russia and Ukraine. Gold and Commodities were the positive highlights of the month. Among the commodities, grains had the best performance (+13%), since it was already suffering from the scarcity in world stocks and the high costs of fertilizers and pesticides. On the negative highlights, the 10 Y-20 Y Treasuries were affected by its high duration, and EMBI index was impacted by duration and credit risk.

The foreign investment inflow had a positive impact on commodities related companies (and on IBrX). On the other hand, the Small Cap index had a poor performance, due to the Health Care and Consumer returns. The interest rate market remains without a defined tendency. After the hawkish speech by the Brazilian Central Bank, the yield curve stopped deteriorating, but remains with high volatility and strongly related to the inflation data. While some economists consider the real interest rate highly contractionary (and that the decrease could take place later this year), others have a more cautious speech, since the inflation can still be impacted by the conflicts in Ukraine.

Amapa portfolio returned -0.5% mtd, below its benchmark. The performance was negatively impacted by the Local and International Equities classes, that returned -1.9% and -5.0% mtd, respectively. On the other hand, Hedge Funds performed +2.3% mtd and +4.4% ytd.
