

The relief in international markets, combined with the end of the presidential election, robust data on employment and economic activity, contributed to strong performance in local market. While industrials sector (Weg, Rumo, Santos Brasil, Embraer etc.) contributed with a positive return of +17,8% in the IBX, materials (Vale and Steel Mills) were the negative highlight, with -2.3% performance mtd. Small Caps also benefited from the Industrials segment, which represents 20% in the SMALL index. Among the Fixed Income assets, the CDI remains the positive highlight of the year. The pre-fixed and inflation linked securities were also a positive highlight in the month, but not enough to outperform the CDI ytd.

In the end of August, FED adopted a stronger speech regarding its role in the monetary policy, reassuring its commitment to bringing inflation to the 2% target and warning that this process would bring "pain to households and businesses". After the strong negative impact on the prices in September, we had, in October, a partial recovery of these same prices. The assets most related with economic activity (Stocks and High Yield) were the ones that recovered the most. As for the assets that are more sensitive to variations in Long Term Interest Rates, they continued to suffer from the steep of the Interest Rate Curve. The current Interest Rate Curve indicates that at the end of the monetary tightening process, interest rates should reach 5.00% in 1Q23.

The FT portfolio returned +1.8% mtd, accumulating 7.1% ytd. The highlights of October were Local Equities (+6.8%) and International Equities (+3.9%). In the year to date period, Hedge Funds (+21.3%) and Fixed Income Low Vol (+10.9%) remains with strong performances.
