

The improvement in the international market drove Emerging markets to a good performance, as seen in Brazil. Here, however, it is worth highlighting the unlocking of the government agenda. The government finally presented its proposal for tax reform, which shall be implemented in a phased manner. It would start with the unification of the PIS / Cofins in a single tax rate of 12%, followed by tax exemption on the payroll, creation of the contribution on payments, changes in the IPI and in the income tax. In addition, after the new sanitation framework, the government is working to regulate the gas market, cabotage and autonomy of the Central Bank.

July was another month with positive performance in the markets, showing total recovery from the losses of the months of February and March in certain asset classes. The stock markets has outperformed, driven by technology stocks, while other more cyclical sectors remain on the sidelines. The support given by FED to the credit market and also the income provided to the population should dictate the recovery of other sectors, as American consumers return to the streets. The approval of the Recovery Fund by the European Union was another good news for the markets. On the other hand, 2nd waves of the virus continue to appear, without the need, for the moment, to adopt isolation measures.

Amapa local portfolio returned +4.6%, and its benchmark, +3.1%. July recorded gains, mainly due to the Brazilian Equities and Fixed Income performance, +10.1% and +3.2%, respectively. The international portfolio also had a positive performance +3.1%. The positive highlight was International Equities that recorded gain of +4.8%, contributing to the strong performance of the portfolio.
